

Monthly Report
February 2026
Subject Code: COM224014

Name of Student: Om Vaidya
Department: B-Tech Computer Engineering
Division & Roll No: B - 40
Industry: AB InfoTech Pvt. Ltd.

Monthly report

- Number of days working in Offline manner- 20days
- Number of days working in Online manner- 00 days
- **Tasks Assigned by Industry-** The tasks assigned during February included learning and implementing Artificial Intelligence and Machine Learning concepts through practical projects. The focus was on understanding machine learning algorithms, natural language processing, computer vision techniques, and developing AI-based applications such as sentiment analysis, stock price prediction, and face recognition systems
- **Task Completed by Student-** Successfully implemented multiple AI and Machine Learning projects including Social Media Sentiment Analysis, Stock Price Prediction using Time Series Forecasting, Automated Attendance System using Face Recognition, and a Deep Learning based Face Recognition System.
- **Whether task is in team or individual?** – Team and Individual Both
- **Summary of Work Done-** During February 2026, I worked on developing multiple Artificial Intelligence and Machine Learning mini-projects using Python and Google Colab. I implemented a Social Media Sentiment Analysis system that classifies text into positive or negative sentiment using NLP techniques. I also worked on a Stock Price Prediction project using time-series forecasting methods where historical stock data was analyzed to predict future trends. Additionally, I developed a Face Recognition System using deep learning and OpenCV and created an Automated Attendance System using Face Recognition.
- **Programming languages, tools, software, or systems used**
 - **Programming Languages:** Python
 - **Libraries & Frameworks :** NumPy, Pandas, Scikit-learn, TensorFlow/Keras, OpenCV, NLTK
 - **Tools & Software:** Google Colab, Jupyter Notebook, GitHub
- **Approach used to analyze and solve problems**

A systematic approach was followed by understanding the problem statement, analyzing datasets, performing preprocessing, training machine learning models, evaluating results, and improving performance through debugging and optimization.
- **Technical concepts learned during the period**

Machine Learning fundamentals, Natural Language Processing, Sentiment Analysis, Time Series Forecasting, Face Detection and Recognition, Image preprocessing, Model evaluation metrics.

K. K. Wagh Institute of Engineering Education and Research, Nashik
Department of Computer Engineering
AY 2025-26

- New technologies or skills learned

Natural Language Processing using Python, Computer Vision using OpenCV, Deep Learning using TensorFlow/Keras, Time Series analysis.

- Challenges or technical problems faced

Challenges occurred during dataset preprocessing, text cleaning in NLP tasks, and preparing image datasets for face recognition. These issues were resolved through debugging and reviewing documentation.

- Support taken from mentors, documentation, or self-learning

Support was taken from the industry mentor, Python documentation, research resources, and self-learning through practice on Google Colab.

- Deadline assigned for task / work completion- End of February 2026

- Date of completion- 28 February 2026

- Feedback / Suggestions received from Industry Mentor and Improvements Made

The mentor suggested improving model accuracy and organizing project code more efficiently. Based on this feedback, preprocessing techniques were improved and results visualization was added.

- Documentation or reports prepared for industry related to work assigned

- Project documentation
- Weekly progress reports,
- Dataset preprocessing notes
- Model Evaluation Project

Additional Points

- Key learning outcomes and achievements

Successfully implemented multiple AI/ML mini-projects and gained practical experience in machine learning, NLP, and computer vision.

- Skills developed (technical and professional)

Technical: Python, Machine Learning, NLP, Computer Vision

Professional: Problem-solving, analytical thinking, documentation, time management.

- Areas of improvement identified

Advanced deep learning architectures, model optimization techniques, deployment of machine learning models

K. K. Wagh Institute of Engineering Education and Research, Nashik
Department of Computer Engineering
AY 2025-26

- How the experience can contribute to career development-

This internship strengthened my understanding of Artificial Intelligence and Machine Learning and provided practical experience in building real-world AI applications, which will support future career growth in data science and software development.
